Vol 8 No 1 **February 1996**

Cytoskeleton
Edited by Velia M Fowler and Ron Vale

1 **Velia M Fowler and Ron Vale**
Editorial overview

4 **Isabelle Vernos and Eric Karsenti**
Motors involved in spindle assembly and chromosome segregation

10 **Mary E Porter**
Axonemal dyneins: assembly, organization, and regulation

18 **Martin Bähler**
Myosins on the move to signal transduction

23 **Francis J McNally**
Modulation of microtubule dynamics during the cell cycle

30 **Stewart Frankel and Mark S Mooseker**
The actin-related proteins

38 **Diedrik Menzel**
The role of the cytoskeleton in polarity and morphogenesis of algal cells

43 **Lewis G Tilney and Mary S Tilney**
The cytoskeleton of protozoan parasites

49 **Alain Viel and Daniel Branton**
Spectrin: on the path from structure to function

56 **Pam Cowin and Brian Burke**
Cytoskeleton–membrane interactions

66 **Sally H Zigmond**
Signal transduction and actin filament organization

74 **Susan W Craig and Robert P Johnson**
Assembly of focal adhesions: progress, paradigms, and portents

86 **Velia M Fowler**
Regulation of actin filament length in erythrocytes and striated muscle

97 **Karen L Vikstrom and Leslie A Leinwand**
Contractile protein mutations and heart disease

106 **Mark S Longtine, Douglas J DeMarini, Maria L Valencik, Omayma S Al-Awar, Hanna Fares, Claudio De Virgilio and John R Pringle**
The septins: roles in cytokinesis and other processes

Current world literature

Cell regulation
Edited by Sara A Courtneidge and Alan Hall

137 **Sara A Courtneidge and Alan Hall**
Editorial overview

139 **Peter ten Dijke, Kohei Miyazono and Carl-Henrik Heldin**
Signaling via hetero-oligomeric complexes of type I and type II serine/threonine kinase receptors

146 **J Thomas Parsons**
Integrin-mediated signalling: regulation by protein tyrosine kinases and small GTP-binding proteins

153 **Christopher L Carpenter and Lewis C Cantley**
Phosphoinositide kinases

159 **Sarah Spiegel, David Foster and Richard Kolesnick**
Signal transduction through lipid second messengers

168 **Susan Jaken**
Protein kinase C isozymes and substrates

174 **Ann Marie Pendergast**
Nuclear tyrosine kinases: from Abl to WEE1

182 **Michel Streuli**
Protein tyrosine phosphatases in signaling

189 **Heidi E Hamm and Annette Gilchrist**
Heterotrimeric G proteins

197 **Christopher J Marshall**
Ras effectors

205 **Richard Treisman**
Regulation of transcription by MAP kinase cascades

216 **Richard A Cerione and Yi Zheng**
The Dbl family of oncogenes

223 **Curt Wittenberg and Steven I Reed**
Plugging it in: signaling circuits and the yeast cell cycle

231 **Joseph B Duffy and Norbert Perrimon**
Recent advances in understanding signal transduction pathways in worms and flies

239 **Alexander Levitzki**
Targeting signal transduction for disease therapy

245 **Pam Cowin and Brian Burke**
Erratum: Cytoskeleton–membrane interactions

Current world literature

Vol 8 No 3 **June 1996**

Nucleus and gene expression
Edited by Ulrich K Laemmli and Robert Tjian

299 **Ulrich K Laemmli and Robert Tjian**
Editorial overview: A nuclear traffic jam – unraveling multicomponent machines and compartments

303 **B Franklin Pugh**
Mechanisms of transcription complex assembly

312 **Erich A Nigg**
Cyclin-dependent kinase 7: at the cross-roads of transcription, DNA repair and cell cycle control?

318 **Irma Sánchez and Brian D Dynlacht**
Transcriptional control of the cell cycle

325 **Kevin McConnell and William S Dynan**
The DNA-dependent protein kinase: a matter of life and (cell) death

331 **Melissa D Adams, David Z Rudner and Donald C Rio**
Biochemistry and regulation of pre-mRNA splicing

340 **Heike L Pahl and Patrick A Baeuerle**
Control of gene expression by proteolysis

348 **Rosalind M John and M Azim Surani**
Imprinted genes and regulation of gene expression by epigenetic inheritance

354 **Catherine Anne Fox and Jasper Rine**
Influences of the cell cycle on silencing

358 **Susan Gray and Michael Levine**
Transcriptional repression in development

365 **John Newport and Hong Yan**
Organization of DNA into foci during replication

369 **Paul D Kaufman**
Nucleosome assembly: the CAF and the HAT

374 **Kathleen Collins**
Structure and function of telomerase

381 **Tim J Yen and Bruce T Schaar**
Kinetochore function: molecular motors, switches and gates

389 **Christa Heyting**
Synaptonemal complexes: structure and function

397 **Nelly Panté and Ueli Aebi**
Toward the molecular dissection of protein import into nuclei

Current world literature

Membrane permeability

Edited by Lily Yeh Jan and Yuh Nung Jan

449 **Lily Yeh Jan and Yuh Nung Jan**
Editorial overview

452 **John L Spudich and Janos K Lanyi**
Shuttling between two protein conformations: the common mechanism for sensory transduction and ion transport

458 **Sarah M Assmann and Laura L Haubrick**
Transport proteins of the plant plasma membrane

468 **Ernest M Wright, Donald DF Loo, Eric Turk and Bruce A Hirayama**
Sodium cotransporters

474 **R Alan North**
Families of ion channels with two hydrophobic segments

484 **Michael D Ehlers, Andrew L Mammen, Lit-Fui Lau and Richard L Huganir**
Synaptic targeting of glutamate receptors

490 **Frank Striggow and Barbara E Ehrlich**
Ligand-gated calcium channels inside and out

Membranes and sorting

Edited by Ira Mellman

497 **Ira Mellman**
Editorial overview

499 **Tom A Rapoport, Melissa M Rolls and Berit Jungnickel**
Approaching the mechanism of protein transport across the ER membrane

505 **Roland Lill, Frank E Nargang and Walter Neupert**
Biogenesis of mitochondrial proteins

513 **Suresh Subramani**
Convergence of model systems for peroxisome biogenesis

519 **Caroline Denesvre and Vivek Malhotra**
Membrane fusion in organelle biogenesis

524 **Jonathan R Monck and Julio M Fernandez**
The fusion pore and mechanisms of biological membrane fusion

534 **James G Alb Jr, Melissa A Kearns and Vytas A Bankaitis**
Phospholipid metabolism and membrane dynamics

542 **Robert G Parton**
Caveolae and caveolins

549 **Matthew NJ Seaman, Christopher G Burd and Scott D Emr**
Receptor signalling and the regulation of endocytic membrane transport

557 **John Chant**
Generation of cell polarity in yeast

566 **Akihiro Kusumi and Yasushi Sako**
Cell surface organization by the membrane skeleton

Current world literature

575 Contents

575 Membrane permeability

586 Membranes and sorting

Cell-to-cell contact and extracellular matrix

Edited by Peter Ekblom and Rupert Timpl

599 **Peter Ekblom and Rupert Timpl**
Editorial overview: A multifaceted approach emerging

602 **E Yvonne Jones**
Three-dimensional structure of cell adhesion molecules

609 **Patrik Maurer, Erhard Hohenester and Jürgen Engel**
Extracellular calcium-binding proteins

618 **Rupert Timpl**
Macromolecular organization of basement membranes

625 **Michael D Henry and Kevin P Campbell**
Dystroglycan: an extracellular matrix receptor linked to the cytoskeleton

632 **Martin J Humphries**
Integrin activation: the link between ligand binding and signal transduction

641 **Reinhard Fässler, Elisabeth Georges-Labouesse and Emilio Hirsch**
Genetic analyses of integrin function in mice

647 **Luca Borradori and Arnoud Sonnenberg**
Hemidesmosomes: roles in adhesion, signaling and human diseases

657 **Shoukat Dedhar and Gregory E Hannigan**
Integrin cytoplasmic interactions and bidirectional transmembrane signalling

670 **David Garrod, Martyn Chidgey and Alison North**
Desmosomes: differentiation, development, dynamics and disease

679 **Urs Rutishauser**
Polysialic acid and the regulation of cell interactions

685 **Otmar Huber, Christiane Bierkamp and Rolf Kemler**
Cadherins and catenins in development

692 **Ari-Pekka J Huovila, Eduardo AC Almeida and Judith M White**
ADAMs and cell fusion

700 **Peter Ekblom**
Receptors for laminins during epithelial morphogenesis

707 **Frank S Walsh and Patrick Doherty**
Cell adhesion molecules and neuronal regeneration

714 **Dominique Dunon, Luca Piali, and Beat A Imhof**
To stick or not to stick: the new leukocyte homing paradigm

724 **Judith A Varner and David A Cheresh**
Integrins and cancer

731 **Carol B Basbaum and Zena Werb**
Focalized proteolysis: spatial and temporal regulation of extracellular matrix degradation at the cell surface

Current world literature

Vol 8 No 6 **December 1996**

Cell multiplication

Edited by Steven I Reed and James L Maller

763 **Steven I Reed and James L Maller**
Editorial overview

767 **David O Morgan**
The dynamics of cyclin dependent kinase structure

773 **Adam D Rudner and Andrew W Murray**
The spindle assembly checkpoint

781 **Elspeth Stewart and Tamar Enoch**
S-phase and DNA-damage checkpoints: a tale of two yeasts

788 **Robert A Sclafani**
Cyclin dependent kinase activating kinases

795 **Daniel J Lew and Sally Kornbluth**
Regulatory roles of cyclin dependent kinase phosphorylation in cell cycle control

805 **Jiri Bartek, Jirina Bartkova and Jiri Lukas**
The retinoblastoma protein pathway and the restriction point

815 **Stephane Chevalier and J Julian Blow**
Cell cycle control of replication initiation in eukaryotes

Cell differentiation

Edited by Elaine Fuchs and Eric Olson

823 **Elaine Fuchs and Eric Olson**
Editorial overview

826 **Regina P Brun, Jae B Kim, Erding Hu, Soner Altiok and Bruce M Spiegelman**
Adipocyte differentiation: a transcriptional regulatory cascade

833 **Mathias Treier and Michael G Rosenfeld**
The hypothalamic–pituitary axis: co-development of two organs

844 **Irma Thesleff and Pekka Nieminen**
Tooth morphogenesis and cell differentiation

851 **Ahmed Mansouri, Marc Hallonet and Peter Gruss**
Pax genes and their roles in cell differentiation and development

858 **Derek L Stemple and Wolfgang Driever**
Zebrafish: tools for investigating cellular differentiation

865 **Sarah J Liljegren and Martin F Yanofsky**
Genetic control of shoot and flower meristem behavior

870 **Todd S Zorick and Greg Lemke**
Schwann cell differentiation

877 **Kyuson Yun and Barbara Wold**
Skeletal muscle determination and differentiation: story of a core regulatory network and its context

890 **Jonathan R Monck and Julio M Fernandez**
Corrigendum: The fusion pore and mechanisms of biological membrane fusion

890 **James G Alb Jr, Melissa A Kearns and Vytas A Bankaitis**
Corrigendum: Phospholipid metabolism and membrane dynamics

Ceramide-activated protein kinase (CAPK), 162–163
Chaperones, in protein uptake, 515
Checkpoint genes (S-phase and DNA damage), 781–787
DNA replication in checkpoint control, 798
Chemoattractants, current list, 718
Chemokines, leukocyte homing, 717
Chlamydomonas, axonemal dyneins, 10–17
Chromatin, silenced, 354–355
Chromosome assembly factor-1 (CAF1), nucleosomes, 369–373
Chromosome segregation
congression, 383–385
motors, 4–9
Cryptosporidium spp, motor proteins, 43–48
Cyclin
CDK activation, 767–769
CDK-activating kinase (CAK), 788–794
Cyclin–Cdk complexes, regulation of pol II transcription, 321
Cyclin-dependent kinases
catalytic and regulatory subunits, 767
Cdc2/Cdc28, regulation of T161, Y15 and T14, 795–804
CDK7, 312–317
CDK-activating kinase (CAK), 788–794
CDK–cyclin regulation of pol II transcription, 770
inhibitors, 242, 808–809
phosphorylation in cell cycle control, 795–804
role in prevention of re-replication, 818
structure dynamics in cell multiplication, 767–772
structures, 768
Cystinuria, 470
Cytokinesis, septins, 106–119
Cytoskeleton, 1–120
arps, 30–37
cell surface organization, 566–574
cytoskeleton–membrane interactions, 56–65
kinesins, 4–9
microtubule dynamics, 23–29
PI3K regulation, 156
protozoan parasites, 43–48
role in disease, 18–22, 43–48, 97–105
role in morphogenesis, algal cells, 38–42
signal transduction pathways, 1
Cytoskeleton–membrane interactions, 56–65

Dbl family of oncogenes, cell regulation, 216–222
Deafness genes, Usher syndrome, 20
Degenerins, *Caenorhabditis elegans*, 477
Dematin, 88
Dental enamel, tooth morphogenesis, cell differentiation, 844–850
Desmosomes, 670–678
  assembly and segregation, 674–675
  cadherin subfamilies, 672
  and calcium, 673
  connections, 58–59
  in development, 672
  hemidesmosomes, 647–656
  isoforms, 670
  putative CAR sites, 671
  response to signals, 673
1,2-Diacylglycerol, second messenger, 159–167
Dihydropyridine receptor, 492
Disease processes
  PTK blockers, 240–242
  targeting signal transduction, 239–244
DNA, scaffold-attachment regions (SARs), 393
DNA replication, organization into foci, 365–368
DNA-damage checkpoints, and S-phase, 781–787
DNA-dependent protein kinase (DNA-PK), 325–330
Drosophila melanogaster
  arps, 30–37
  chromosome assembly factor-1 (CAF1), 369–373
  epidermal growth factor receptor (DER), 231–238
  MRF and MEF2 functions, 884–886
  Myh mutant alleles, 99
  myosin ninaC, 18–22
  oocyte patterning and axis determination, 233–235
  Ras effectors, 198
  Ras–Raf–ERK MAPK modules, transcription factor targets, 208
  recombination nodules (RNs), 392
  role of motors in centrosome separation, 4–5
  septins, in cytokinesis, 120–121
  signal transduction pathways, 231–238
  transcriptional repression in development, 358–364
Dyneins, 381–382
  axonemal, 10–17
  dynein regulation complex, 12–13
Dystroglycan
  branching epithelial morphogenesis, 702–703
  structure and function, 625–631

E1, E2 and E3 proteins, ubiquitinylation reaction, 340–347
ECD1 (amino-terminal domain of E-cadherin), 602–608
EGF receptors, 549–550
Enamel, tooth morphogenesis, cell differentiation, 844–850
Endocytosis
  caveolae and caveolins, 545–546
  membrane transport, and receptor signalling, 549–556
Endoplasmic reticulum, protein transport, 499–504
Epidermal growth factor
  EGF RTK and NOTCH/LIN-12 pathways, *C. elegans* and *Drosophila*, 235–236
  EGF-like domain, calcium-binding, 614
  receptors, role, 78
Epidermal growth factor receptor, EGFR blockers in disease treatment, 241
Epidermal keratinocytes, hemidesmosomes, 648
Epigenetic inheritance, 348–353
Epithelial basement membrane assembly, 700–701
Epithelial morphogenesis, laminin receptors, 700–706
Epithelial–mesenchymal interactions, signalling, 844–846
Epithelial–mesenchymal transition, vertebrate development, 685
Erythrocytes, length regulation of actin filaments, 86–90
Erythropoiesis, zebrafish, 861
Erythropoietin signalling, 183–184
Escherichia coli, mechanosensitive channels, 479–480
Extracellular matrix (ECM)
  calcium-binding proteins, 609–617
  interactions with hemidesmosomes, 649–650
  proteases, pericellular activation, 731–732
  proteolysis, 731–736
  receptors, dystroglycan, 625–631
  see also Cell–cell contact and ECM

Fas-associated phosphatase-1 (FAP1, PTP-BAS, hPTP1E), 184
Fertilin-mediated membrane fusion, in fertilisation, 693–694
Fibrillin, model, 614
Fibronectins
  FAK complexes, Src or Fyn, 147
  integrin ligand, 604
  receptor integrins, null mutations, 641
Filamentous proteins, septins, 106–119
FK506-binding protein (FKBP)
  defined, 492
  and ryanodine receptor, 490–495
Flagella, axonemal dyneins, 10–17
FMRFamide-gated channel, 477
Focal adhesion kinase (FAK), 663–664
  FAK-binding proteins, 148
  phosphorylation, 147–148
Focal adhesions
  assembly, 74–85
  in vivo systems, 81
Follicle stimulating hormone (FSH), regulation, 838
Fucus, polarity and tip growth of zygote, 38–39
Furin/PACE/kex 2-like proteases, 731
Fusicoccin, regulation of ATPase, 459–460
Fusion pore
  membrane fusion, 524–533, 890
  release of secretory contents, 529–531

γ-carboxyglutamate (GLA)-containing domain, calcium-binding, 615
G proteins
  Gα subunit, 189–190, 192
  Gβγ dimer, structure, 190–193
  GTP hydrolysis, 190, 521
  heterotrimeric, 191–192
  regulation of integrin-mediated signalling, 146–152
  Rho family, 20, 66–73, 74–85
Genes, imprinted, regulation of gene expression, 348–353
Genetic screening, zebrafish, 858–864
Glucose–galactose malabsorption, 470
GLUT-4 trafficking, signal-mediated, 552–553
Glutamate receptors, synaptic targeting, 484–489
Glycerolipid-derived second messengers, 159–167
  and sphingolipids, 164
Green fluorescent protein, 516, 562
Gsh-1 homeodomain factor, 839
GTP hydrolysis, 190, 521
GTP-binding proteins *see* G proteins
GTPase Ran, 401
GTPase-activating protein (GAP), yeast cell cycle, 223
Guanine nucleotide exchange (GEF) factors, Dbl-like, 217–221

Halobacteria, proton pumps, 452–457
Halorhodopsin, 453
Heart disease

contractile protein mutations, 97–105
benign vs malignant β Myh mutations, 101
Helix–loop–helix, basic (bHLH) muscle regulatory factors (MRFs), 877–888
Hemidesmosomes, 647–656
intermediate filaments, connections, 647–649
in vivo function, gene targeting, 652
Histone acetyltransferase (HAT), nucleosomes, 369–373
Hop diffusion, 567
Hsp/hsc-70, ATPase domain, 30
Hypothalamic–pituitary axis, cell differentiation, 833–843

Importin α/NLS receptor, 399–400
Importin β/p97, 400–401
Imprinted genes, regulation of gene expression, 348–353
Inflammatory disease, PTK blockers, 241
Integrin-mediated signalling, cell regulation, 146–152
Integrins
α4β7 integrin, lymphocytes, 715
α6β4 integrin, 650–652
activation, 632–640
anti-integrin mAbs, 635–636
β1 gene, null mutations, 644
β integrins, sequences, 659
blood cells, migration and differentiation, 644–645
and cancer, 724–730
tumor angiogenesis, 726–727
tumor cell proliferation, 724–726
and cellular motility, 726
cytoplasmic interactions and bidirectional transmembrane signalling, 657–669
defined, 604
domains
interacting proteins, 657, 658–661
major conformational sites, 637
structure, 604, 633
focal adhesion assemblies, 76
genetic analyses, function in mice, 641–646
hemidesmosome formation, 650–651
ligand-binding sites, and signal transduction, 632–640
ligands, 604–606
MIDAS motif, 604, 634
regulation of activity, 716
regulation of downstream signalling cascades, 148
signal transduction and protein phosphorylation, 661–666
'outside-in' signalling, 663–665
vitronectin receptor, 665
Ion channels
FMRFamide-gated channel, 474–483
ligand-gated calcium channels, 490–495
with two hydrophobic segments, 474–483
Ion transport
potassium, plants, 460–463
and sensory transduction, 452–457

Junctional epidermolysis bullosa (JEB), 647, 652

Kidney
dystroglycan, 628
secretory channels, 474–483
Kinesin-related proteins (krps), 381–382
Kinesins
kinesin-like proteins, spindle assembly, 4–9
mitotic centromere-associated kinesin, 4–9
spindle assembly, 23–29
Kinetochores
mitotic checkpoint control, 385–386
in spindle assembly, 773–780
structure and function, 383–388

Lactacystin, 341
Laminin receptors
binding sites, 621–622
epithelial morphogenesis, 700–706
integrins, null mutations, 643–644
Laminins
isoforms, 619, 700–701
laminin receptors, basement membrane assembly, 700
laminin-1, 701–702
laminin-1 receptors, 702–703
Lamins, nuclear lamina, cytoskeleton–membrane interactions, 60–65
Laser tweezers, 568
Lectins (carbohydrate-binding proteins), 606
calcium-binding, 615
Leukocyte function associated antigen-1 (LFA-1), 604
Leukocyte homing, 714–723
transmigration across epithelium, 719–720
Liddle's syndrome, 477
Ligand-gated calcium channels, 490–495
LIM homeodomain factor Lhx3/P-Lim/mLim-3, 834
Lipid second messengers, signal transduction, 159–167
Low-density lipoprotein (LDL) receptor, 344–345
Lysophosphatidic acid (LPA), 161
assembly of FAs/SFs, 74
receptor, 77–78

MADS-box transcription factors, 879
Mannose-binding proteins (MBPs), 606
MAPK *see* Mitogen-activated protein kinase (MAPK) family
MARCKS protein, 487, 554
Marfan syndrome, extracellular calcium-binding proteins, 609
Matrix metalloproteases, domains, in ADAMs, 696–697
MCAK (mitotic centromere-associated kinesin), 5, 381, 383
Mechanochemical transduction, contractile protein mutations, 97–105
Meiosis-specific synaptonemal complex components, table, 391
Membrane fusion
fusion pore, 524–533
known requirements, 520
organelle biogenesis, 519–523
Membrane permeability
glutamate receptors, synaptic targeting, 484–489
ion channels with two hydrophobic segments, 474–483
ligand-gated calcium channels, 490–495
plant plasma membrane, 458–467
sensory transduction and ion transport, 452–457
sodium cotransporters, 468–473
transport proteins, plant plasma membrane, 458–467
Membrane skeleton, cell surface organization, 566–574
Membrane-type MMPs (MT-MMPs), 731–738
Membranes and sorting
caveolae and caveolins, 542–548
cell polarity in yeast, 557–565
cell surface organization by membrane skeleton, 566–574
fusion pore, 524–533
mitochondrial proteins, 505–512
organelle biogenesis, membrane fusion, 519–523
peroxisome biogenesis, 513–518
phospholipid metabolism, 534
protein transport, 499–504
receptor signalling, and regulation of endocytic membrane transport, 549–556

Ménage-à-trois-1 (MAT1), 313
Meristem differentiation in *Arabidopsis*, 865–869
Metalloprotease domains, in ADAMs, 696–697
Micrasterias, radial morphogenesis, 40–41
Microtubule-associated proteins
  MAP2, 23–29
  MAP4, 24–25
  XMAP, 25
Microtubules
  dynamics, cell cycle, 23–29
  nucleation by γ-tubulin, structural basis, 26
  severing, 26–27
  spindle-like arrays, 4–9
MIDAS motif, integrins, 604, 634
Minichromosome maintenance (MCM) protein family, 365
  MCM/P1, licensing factor system, 816–817
Mitochondrial input stimulation factor (MSF), 505
Mitochondrial proteins, biogenesis, 505–512
Mitogen-activated protein kinase (MAPK) family, 312
  links with transcription factors, 205
  MAPK cascades, regulation of transcription, 205–215, 664
  MAPK–transcription factor interactions, 210–211
  scaffold protein Ste5p, 192
Mitogenesis, and PI3K, 154–156
Mitotic centromere associated kinesin (MCAK), 5, 381, 383
Mitotic checkpoint control, kinetochores, 385–386
Motor proteins
  contractile protein mutations, 97–105
  protozoan parasites, 43–48
Motors
  chromosome segregation, 4–9
  myosin motors, 18–22
Mouse *see* Vertebrates
Myoblast fusion, and proteins with a disintegrin and metalloprotease domain (ADAMs), 696–697
Myocyte enhancer factor-2 (MEF2) transcription factors, 877–888
  enhancing MRF action, 881–882
MyoD bHLH muscle regulatory factors (MRFs), 877–888
  number, 882
Myosin binding protein C, mutant alleles, 99–100
Myosin heavy chain gene, mutations, 98
Myosin motors, signal transduction, 18–22

NCD1 (amino-terminal domain of N-cadherin), 602–608
Nebulette, 90
Nebulin, 90
Neural crest, zebrafish, 860
Neural regulatory factors (NRFs), 884
Neuregulins, Schwann cell differentiation, 870–871
Neuromuscular junction, dystroglycan, 628
Neuron-restrictive silencer element (NSRE), 361
Neuronal regeneration, cell adhesion molecules, 707–713
Neuronogenesis, interacting regulatory circuits, evolution, 884–886
Neurotransmitters, ion channels, 474–483
NF-κB, 341–344
Nitrate uptake, proton cotransporters, 458–467
NMDA-receptor clustering, 485–487
Notochord
  core skeletal myogenic network, 879
  zebrafish, 859–860
Nuclear export
  nuclear export signals (NESs), 403–404
  signals and factors, 403–404
Nuclear hormone receptors, peroxisome proliferation-activated receptor subfamily, 826–827
Nuclear lamina, cytoskeleton–membrane interactions, 60–65
Nuclear localization sequence-bearing (NLS) proteins, 397
Nuclear pore complex (NPC), structure and composition, 397–399
Nuclear transport factor-2 (NTF2), NTF2/p10, 401
Nuclear tyrosine kinases, cell regulation, 174–181
Nucleosome assembly
  CAF and HAT, 369–373
  nucleosome assembly protein-1 (NAP1), 371
Nucleus and gene expression
  cell cycle
    influences on silencing, 354–357
    transcriptional control, 318–324
  cyclin-dependent kinase-7, 312–317
  DNA organization into foci during replication, 365–368
  DNA-dependent protein kinase, 325–330
  epigenetic inheritance, 348–353
  imprinted genes, 348–353
  kinetochore structure and function, 383–388
  nucleosome assembly, CAF and HAT, 369–373
  pre-mRNA splicing, 331–339
  protein import, 397–406
  proteolysis, 340–347
  synaptonemal complexes, structure and function, 389–396
  telomerase, structure and function, 374–380
  transcription complex assembly, 303–311
  transcriptional repression in development, 358–364

Oncogenes
  Dbl family, cell regulation, 216–222
  targeting expression, 242
Oncogenesis
  Pax genes, 854
  pRb pathway, 811
Organelle biogenesis, membrane fusion, 519–523
Organogenesis, *Pax* genes, 854
Origin recognition complex (ORC)
  DNA replication, 365–368
    initiation, 815–821
  role in silencing, 355
Orphan nuclear receptor SF-1, 837

p53 gene
  spindle assembly checkpoint, 776
  and viral E6, 341
$p125^{FAK}$, 74–81
Papilloma, PTK blockers, 241
Paramecium, regulation of motility, 13–14
Pax genes, roles in cell differentiation, 851–857
Peroxisome proliferation-activated receptor subfamily, nuclear hormone receptors, 826–827
Peroxisomes, biogenesis, 513–518
Phagocytosis, 553–554
Phosphatases, receptor, regulation of axon growth, 710
Phosphatidylinositol 3-kinase
  DNA-PK catalytic subunit, 325
  inhibition by wortmannin, 77
  and protein sorting, 551–552
  secretion and vesicle trafficking, 156
  structure, 154
Phosphatidylinositol kinase family
  biochemical targets, 157
  cellular functions, 154–157
  homology with protein kinases, 153–154
Phosphatidylinositol transfer protein function
  higher eukaryotes, 536–539
  yeast, 535–536
Phosphoinositide kinases, cell regulation, 153–158
Phospholipase C, lipid-derived second messenger, 159

Phospholipase D, 160
Phospholipid metabolism, and membrane dynamics, 534, 890
Phototransduction, 18
Pituitary
  hypothalamic–pituitary axis, cell differentiation, 833–843
  origin and early commitment, 833–834
Plakoglobin, 674, 685
  and β-catenin, signal transduction, 56–60
Plants
  nitrate and ammonium ion transport, 463–464
  plasma membrane, permeability, 458–467
  potassium ion transport, 460–463
  shoot and flower meristem differentiation, 865–869
Plasmodium spp, motor proteins, 43–48
Platelet-derived growth factor (PDGF)
  actin assembly, 77
  PI hydrolysis, 664
  receptors, 551–552
    role, 78
Pol I and III transcription, regulation, 322
Pol II transcription, cyclin–Cdk complexes, 321
Polysialic acid, 679–684
  biosynthesis, 679–680
  in development, 680–681
  in disease, injury and ageing, 681–683
  persistent expression in adult, 681
  phylogeny, 683
Potassium ion, transport in plants, 460–463
POU homeodomain factors
  Brn-2, 839
  Pit-1, 835
Prader–Willi syndrome (PWS), 350
Pre-initition complex assembly, 303
Pre-mRNA splicing, 331–339
  alternative, biochemical and genetic studies, 333–335
Preproteins, 505–512
Proteasome, structure and inhibitors, 341
Protein folding, mitochondria, 509–510
Protein import, 397–406
Protein import into microbodies, 515
Protein kinase C
  isozymes and substrates, 168–173
  target for DAG, 160–161
Protein kinase inhibitor (PKI), shuttling protein, 403
Protein shuttling
  protein kinase inhibitor (PKI), 403
  sensory transduction, 45
Protein sorting, phosphatidylinositol 3-kinase, 551–552
Protein transport
  endoplasmic reticulum, translocation pathway, 499–504
  membranes and sorting, 499–504
Protein tyrosine kinase receptor, endocytosis, regulation, 549–552
Protein tyrosine kinases
  Abl, 176–179
  FA/SF assembly, 78–79
  Fes and Fer, 176
  PTK blockers, 240–242
  Rak, 175–176
  regulation of integrin-mediated signalling, 146–152
  role in nucleus, 174–181
  WEE1 and cell cycle regulation, 174–175
  see also Receptor tyrosine kinase
Protein tyrosine phosphatase (PTPase)
  CD45, 184–185
  in signalling, 182–188
Protein-4.1, 88
Protein–protein interactions
  FKBP and ryanodine receptor, 490–495
  functional regulation, 452–457
  in phototaxis, 452–457
  spectrin, 49–55
Proteins with a disintegrin and metalloprotease domain (ADAMs), 692–699
  characteristics, 694–696
  fertilin-mediated membrane fusion, 693–694
  and myoblast fusion, 696–697
Proteolysis
  control of gene expression, 340–347
  focalized, 731–738
Proto-Dbl protein, 216–222
Proton cotransporters
  nitrate uptake, 458–467
  sodium cotransporters, 468–473
Proton pumps
  ATPases, 458–467
  halobacteria, 452–457
Protozoan parasites, cytoskeleton, 43–48
Psoriasis, PTK blockers, 241
PTB-associated splicing factor (PSF), 337
Ptx1/P-OTX homeodomain factor, 835
Pyrimidine tract RNA-binding (PTB) proteins, 335–336

Rak, and pRb, 175
Ras/MAPK pathway, 664
Ran/TC4, 401
Ras, *see also* G proteins
Ras effectors
  cell regulation, 197–204
  oncogenic transformation, 198
Ras farnesylation, inhibitors, 242
Rathke's pouch, *Rpx*, origin and early commitment, 833–834, 838–840
Receptor signalling, and regulation of endocytic membrane transport, 549–556
Receptor tyrosine kinase (RTK), signal transduction pathway, 231–238
Recombination nodules (RNs), *Drosophila*, 392
Replication, initiation in eukaryotes, cell cycle control, 815–822
Replication centers, 365–368
Replication foci, 366–367
Replication licensing factor system, and MCM/P1 protein family, 816
Restenosis, PTK blockers, 241
Restriction point
  nature of R protein, 809–810
  retinoblastoma tumor suppressor protein pathway, 805–814
Retinitis pigmentosa, myosin motors, 20
Retinoblastoma tumor suppressor protein (pRb)
  pathway, and restriction point, 805–814
  phosphorylation, 806–808
  regulation of E2F, 318–319
  role of Cdk inhibitors, 808–809
  as transcriptional activator, 320–321
  as transcriptional repressor, 320
Rho family
  GTP-binding proteins, 20, 66–73, 74–85
    cytoskeletal targets of regulation, 68–70
    upstream/downstream elements, 66–68
  RhoA, activation, 77–78
Rhodopsins, 452–457
Ribonucleoproteins (RNPs), snRNP, 331
RNA-binding proteins, multiple pyrimidine tract, 335–336
RNA-splicing, 331–339

S-phase, and DNA-damage checkpoints, 781–787

Saccharomyces cerevisiae see Yeast, budding
Scaffold protein, MAPK-associated, 192
Scaffold-attachment regions (SARs), DNA, 393
Schizosaccharomyces pombe see Yeast, fission
Schwann cells, differentiation, 870–876
SCIP mutant mice
  Schwann cell development, 872–874
  SCIP vs Krox-20, 874
Selectins
  and leukocyte homing, 714–715
  ligands, 715
Sensory rhodopsins, 454
Sensory transduction, 454–455
  and ion transport, 452–457
  protein shuttling, 45
Septins, in cytokinesis, 106–119
  cytoskeleton, 563
  in *Drosophila melanogaster*, 114–115
  properties and interactions, 106–111
  in *Saccharomyces cerevisiae* and other fungi, 111–114
  in vertebrates, 115
Serine–arginine-rich (SR) protein, 331
  and splicing enhancers, 332
Serine–threonine kinase receptors types I and II, cell regulation, 139–145
Shuttling proteins
  protein kinase inhibitor (PKI), 403
  sensory transduction, 45
Signal transduction
  and actin filament organization, 66–73
  caveolae and caveolins, 542–548
  inhibitors, selective targets, 241
  lipid second messengers, 159–167
  myosin motors, 18–22
  pathways, 231–238
    cytoskeleton 1
  targeting for disease therapy, 239–244
  to signal reception, 82
  universal and selective inhibitors, 240
Signal transduction pathways, *C. elegans* and *Drosophila*, common elements, 231–238
Signalling circuits, yeast cell cycle, 223–230
Silencing, cell cycle influences, 354–357
Single-particle tracking (SPT), 567
Skeletal muscle
  actin-binding proteins, 90–93
  determination and differentiation, 877–888
  interacting regulatory circuits, evolution, 884–886
  length regulation of actin filaments, 90–93
  MRF knockout mice, 881
Skin diseases, hemidesmosomes, 647–656
Snake venom metalloproteases (SVMPs), 693
SNARE hypothesis, 519–523
SnRNP, splicing and *trans*-splicing, 331
Sodium channels, epithelial ENaCs, 474–477
Sodium cotransporters, 468–473
  regulation, 470
  topology, 469–470
  transporter kinetics, 469
Spectrin, 88
  calmodulin-like domain, 51
  head end interchain binding, 50–51
  organization, 49
  pleckstrin homology domain, 53
  protein–protein interactions, 49–55
  tail end interchain binding, 51
Sperm–egg fusion, ADAMs, 693–696
Sphingolipid-derived second messengers, 161–164
Spindle, and kinetochores, 383–388
Spindle assembly, kinesins, 23–29
Spindle assembly checkpoint, cell multiplication, 773–780
Spindle assembly motors, 4–9
Spindle pole body, protozoan parasites, 43
Spindle-like arrays, microtubules, 4–9
Spliceosomes, SR proteins and snRNP, 332
Src homology (SH) PTP2, 184
Sterol regulated element binding protein (SREBP-1), 340, 344–345
Store-operated channels (SOCs), 493
Stress response, DNA–PK role, 326–327
Synaptic targeting, glutamate receptors, 484
Synaptonemal complexes, structure and function, 389–396

T/EBP/TTF homeodomain factor, 838
Tamoxifen, action in disease process, 242
TATA-binding protein associated factor (TAF), 303–311
Telomerase, structure and function, 374–380
Tetrahymena
  role of motors, 6
  telomerase, 374–380
Theileria spp, motor proteins, 43–48
Thermoplasma acidophilum, 20S proteasome, 341
Thyroid stimulating hormone (TSHβ), regulation, 837–838
Tissue culture, focal adhesions, assembly, 74–85
Tooth morphogenesis, cell differentiation, 844–850
Toxoplasma spp, motor proteins, 43–48
Transcription complex assembly, 303–311
  stepwise assembly vs holo complex, 303–308
Transcription factors
  c-Jun, 341
  disease processes, and nuclear receptors, 242
  E2F, regulation by pRb family, 318
  IIH (TFIIH), CDK7, 313–315
  myocyte enhancer factor-2 (MEF2), 877–888
  MyoD bHLH muscle regulatory factors (MRFs), 877–888
  p53, 341
Transcriptional control, cell cycle, 318–324
Transcriptional repression in development, 358–364
Transcriptional synergism, 308–309
Transforming growth factor-β (TGF-β) superfamily, 139
  TGF receptors, 140–143
Transgenic mice, tooth morphogenesis, 844–850
Translocation pathway, endoplasmic reticulum, 499–504
Trophic hormones, pituitary regulation, 837–838
Tropomodulin, 88–93
Tropomyosin, 88–93
  mutant alleles, 99–100
Troponin, cardiac troponin T, 97–105
Troponin I, 90
γ-Tubulin, nucleation, microtubules, 26
Tumor necrosis factor-α, in proteolytic processing of cell surface proteins, 735–736
Tumors, role of integrins, 724–730
Tyrphostin
  psoriasis, 241
  with RG13022, in carcinoma, 243

Ubiquitinylation reaction, 340–347
Usher syndrome, myosin motors, 20

V-Jun, 341
Vascular cell adhesion molecule-1 (VCAM-1), integrin ligand, 604, 642–643
Vascular cells, angiogenesis, role of integrins, 726–727

Vertebrates
MAPK pathways, 206
MAPK transcription factors, 209
MRF and MEF2 functions, 884–886
Ras effectors, 198
Vesicular integral membrane protein of 21 kDa (VIP21), caveolae, 542–548
Viral fusion, scaffold models, 527–529
Virus-induced cell fusion, 525–527
Vitronectin receptor, 665

Water channels, aquaporins, 464
Wortmannin, phosphatidylinositol 3-kinase inhibition, 77

X-ray repair (XRCC) groups, 326
Xenopus
microtubule-associated protein (XMAP), 25
role of motors in centrosome separation, 4–5
Rpx homolog, 834
XANF-2, 834

Yeast
α2 homeodomain protein, 362
budding (*Saccharomyces cerevisiae*)
checkpoint genes (S-phase and DNA damage), 781–787
filamentous growth, 225–227
budding (*Saccharomyces cerevisiae*), septins, in cytokinesis, 111–119
cAMP pathway, 227
CDK7–cyclin-H–MAT1 complex, 314
cell cycle, signalling circuits, 223–230
cell polarity, 557–565
fission (*Schizosaccharomyces pombe*)
checkpoint genes (S-phase and DNA damage), 781–787
septins, in cytokinesis, 113
Y15 phosphorylation, 796–798
MAPK modules, transcription factor targets, 207
MAPK pathways, 206, 223–230
MATα2 proteolysis, 345
mating pheromone response, 223–225
peroxisomes, biogenesis, 513–518
phosphatidylinositol transfer protein function, 535–536
post-translational translocation pathway, 501
Ras effectors, 198
repression of mating-type genes, 354–357
role of Ku70 protein, 325
spindle assembly checkpoint, 775

Zebrafish
cell differentiation tools for investigations, 858–864
effects of mutations, 859
Zellweger syndrome, 514
Zinc-finger proteins, neuron-restrictive silencer factor (NSRF), 361
